Ryan Stout Joins Performance Services as National Solar Manager

INDIANAPOLIS, IN – Performance Services has announced the addition of [Ryan Stout](#) to its business development team to lead solar system assessments for schools, universities, and municipal government customer projects.

A graduate of Indiana University, Stout is a third generation energy professional, and has managed daily operations and new growth strategies in the solar industry. Stout started his career in the energy storage industry from 2001 and moved to the renewable energy industry in 2008 where he started Greenworks Energy and managed 35 solar installations in commercial and residential markets. In 2010 he became a managing member of Nusun Solar and developed a streamline solar panel manufacturing process for U.S. manufacturers to compete with overseas manufacturing. In 2013 he moved to a senior sales and project management position where he designed and developed over 45 megawatts of solar projects including the Indianapolis International Airport, commercial, municipal and K-12 school markets.

“I’m excited to join the Performance Services’ team and to expand our portfolio of energy solutions by offering a viable renewable energy option. Our new solar photovoltaic (PV) offering will meet the demands and requests of our customers’ sustainability goals, both financial and environmental,” said Stout.

He added, “The amount of money a building owner can save depends on a number of factors including size of roof space, energy usage and roof pitch, to name just a few. It’s important for our team to conduct a full site and technical assessment to evaluate the overall cost of a system and return on investment. Using the last 12 months electricity bills and the data we collect during a facility study, we will be able to create a Solar PV system recommendation to help customers make an informed decision.”

“We are very excited to have Ryan join our team. Considering the new affordability of solar systems, it will enable our customers to save even more energy and more money on their Design-Build or Guaranteed Energy Savings Projects,” said [Scott Zigmund](#), vice president of sales and marketing for Performance Services.

Performance Services is an integrated design and delivery engineering company that specializes in constructing and renovating municipal, healthcare and education facilities to deliver optimal environments through both the Guaranteed Energy Savings and Design-Build procurement methods. Innovative solar systems and water management are integral to the energy services portfolio. The company has designed and delivered high performance buildings with performance guarantees since 1998 and is a leading qualified provider of guaranteed energy savings projects and Energy Star® certified buildings.
